THE ENVIROEYE DRAIN GUARD SYSTEM (EE DGS) is an environmental piece of equipment, monitors storm water for sheen and has multiple configurations which include: external floating roof tanks, dike outfalls, and contact water tanks. The **DGS** works to prevent any unintentional release of hydrocarbons associated with storm water. The **DGS** can signal valves and pumps to activate while also deploying audible & visual alerts, text messages, or control room communications. The **DGS** simplifies operation protocols by automatically detecting product release and possible environmental contaminations, while reducing the guesswork related to storm water and storage tank management.

- Will match your AVML
- C1d1 rated equipment available
- Bypass Manifold
- Flow Indicator
- Cold Weather Package
- Secondary MOV
- Beacon – Visual Alert
- Horn – Audible Alert

- Control Rooms Options
- Slick Sleuth Sensor
- Leave your Valve open for constant draining
- Semi-automate storm water management
- Minimize operator time in inclement weather
- Reduce Site Contamination
- Minimal routine Preventative Maintenance schedule
