EnviroEye® Enhances Drain Guard System with New Features for Summer 2024

Houston, TX — EnviroEye is proud to announce its latest enhancements to the Drain Guard System (EE DGS) designed for optimal performance and safety in harsh weather conditions. The system can now include new options of a cold weather packages, flow indication, and discrete wiring to control rooms, allowing for more comprehensive monitoring.

As you prepare for storm season and review your SPCC plans, consider adding the innovative EE DGS to your system for robust environmental management. Our current configurations include solutions for external floating roof tanks, dike outfalls, contact water tanks, truck racks, rail cars, dock lines, sumps, and well heads.

Protect Your Operations with EnviroEye

EnviroEye is committed to keeping your operators safe, event free and your operations running smoothly, especially during inclement weather. Our DGS allows you to leave the roof drain valve open, constantly drain stormwater and monitor for sheen. A detection of product triggers a valve to close and notifies personal, offering superior product detection with automated visual observation 24/7.

In the last month, we have successfully delivered three new units to be deployed in Oklahoma, Colorado, and Mississippi, adding to our existing deployments. Bulk storage facilities using the EE DGS can automatically respond to roof drain failures, minimizing environmental disasters.

Patent and Demonstrations

EnviroEye has been in service since 2015 and received its first patent in January of 2020, underscoring our commitment to innovation and environmental protection. Demonstrations of our system are available by appointment, with a demo unit located in Houston, Texas.

Upcoming Trade Show Demonstrations

EnviroEye will be showcasing its solutions at upcoming trade shows (dates subject to change):

- NISTM: December 11 & 12, 2024, The Woodlands, Texas
- NISTM: April 23 & 24, 2025, Rosen Shingle Creek, Orlando, Florida
- ILTA: May 2025, George R. Brown Convention Center, Houston, Texas

Invest in Environmental Safety

EnviroEye empowers operators to effectively manage and monitor their stormwater for hydrocarbons. Our system acts as an additional safeguard, automatically closing valves and alerting teams when hydrocarbons are detected, thus protecting the environment, inventory, and assets.
